ABOUT THIS GUIDEBOOK

A LIVING BRAND SYSTEM

A brand accrues meaning over time. The foundation—logo, color, type, structure—is covered in this book so it can be applied consistently, which over time means a single color or a piece of typography carries the entire identity on its own.

This document and the accompanying portal site are the **single source of truth** for everything F1R3FLY brand. As the system develops, we will update these with links to branded PowerPoint templates, document layouts, and additional assets beyond what's already here.

What's in this guide is the foundation: the logo system, the color palette, the typography, and the layout structure that hold F1R3FLY together across every property and touchpoint. What's here is locked. What's marked *in development* is in progress.

Use this guide when creating anything that carries the F1R3FLY name: presentations, documents, web pages, social posts, partner materials. If something isn't covered here, ask before improvising.

Check back often.
Refresh and re-download your documents when you do.

"A NEW BRAND SELDOM MEANS A THING. IT IS AN EMPTY VESSEL AWAITING THE MEANING THAT WILL BE POURED INTO IT BY HISTORY AND EXPERIENCE. THE BEST THING A DESIGNER CAN DO IS MAKE THAT VESSEL THE RIGHT SHAPE FOR WHAT IT'S GOING TO HOLD."

– MICHEAL BEIRUT

FOUNDATION

FOUR THINGS SHOULD STAY CONSISTENT ACROSS EVERY F1R3FLY PROPERTY

The logo, the color system, the typography, and the structure.

Consistency builds **recognition**, and recognition builds **trust** and **credibility**—especially with enterprise and institutional audiences, who read inconsistency as instability.

This book exists to reflect our work, and to build recognition, trust and credibility in our visual systems.

F1R3FLY INDUSTRIES

LOGO: VERTICAL LOCKUP

THE VERTICAL LOCKUP IS THE PRIMARY LOGO CONFIGURATION.

The spacing between the knot icon and wordmark is fixed at **20%** of the icon height. The knot icon occupies the center **40%** of the total width, with **30%** clear space on each side. **These proportions don't change at any size.**

LOGO: VERTICAL LOCKUP

CREATING CLEAR SPACE PROTECTS THE LOGO FROM COMPETING VISUAL ELEMENTS.

The boundary lines shown here are the minimum. **Additional space is always better than tightly fitted.**

The same margins, clear space, and minimum size rules apply to every version of the F1R3FLY logo: vertical lockup, horizontal lockup, logomark alone, and icon.

LOGO: HORIZONTAL LOCKUP

THE HORIZONTAL LOCKUP POSITIONS THE KNOT ICON LEFT OF THE WORDMARK.

Use the horizontal lockup where vertical space is limited—headers, footers, navigation, social media or in combination with partner logo. The knot icon is vertically centered to the text, on the left-hand side, with a space between the knot icon and the wordmark at 30% the width of the knot icon. The type is 40% of the lockup height, with 30% padding above and below.

LOGO: HORIZONTAL LOCKUP

CONSISTENT RULES

Same clear space rules as the vertical lockup. The boundary around the horizontal configuration is the minimum keep-out zone.

LOGO FOR LIGHT BACKGROUND

THESE ARE THE VERSIONS FOR USE ON WHITE OR LIGHT BACKGROUNDS.

Use full-color when the context supports it. Use single-color black **only** when printing limitations or visual simplicity require it.

The dark circular badge versions (bottom row) are for social profiles and app icons on light backgrounds.

LOGO RULES

DARK BACKGROUNDS ARE THE PRIMARY CONTEXT FOR THE F1R3FLY INDUSTRIES LOGO AND BRAND. LIGHT BACKGROUND USAGE IS APPROVED AS SECONDARY.

Don't recolor the logo, distort the proportions, add effects, place it on busy backgrounds without sufficient contrast, or separate the logomark from the wordmark in the lockup configurations.

Logo files are available in SVG, PNG, and PDF formats. Always use the provided files—never ever recreate or approximate the logo.

COLOR PALETTE

THE F1R3FLY PALETTE IS BUILT TO BE THE LIGHT IN DARK ENVIRONMENTS.

Black is the foundation—not a background color, the actual brand surface. Everything else exists in relationship to it—to emphasize light as a metaphor for innovation and bright, intelligent ideas.

This is the primary F1R3FLY identifier—the gradient that ties cyan, sage green, and warm yellow together. Use it for section labels, navigation highlights, and brand accents. Don't use it as a background fill.

SECONDARY COLOR PALETTE

EACH AUDIENCE HAS ITS OWN BRANDED GRADIENT IDENTITY.

These appear on both websites, and presentations. They can be used un social media visuals, and also on printed material.

On our website, these are applied to buttons, section backgrounds, and CTAs to signal who the content is for.

These gradients can be made lighter or dark by 10%, 20% etc, provided the same hue value is maintained.

Client Gradient: Use as the primary gradient for client-facing elements

#5c0269 #7b0429

Developer Gradient: Use as the primary gradient for developer-facing elements

#007bc4 #009188

Partner Gradient: Use as the primary gradient for partner-facing elements

#0c8e23 #7a9d0e

Neutral gradient: Made for universal use with the primary brand gradient

#3f3f3f #1114ad

TYPOGRAPHY

PLEASE NOTE

The F1R3FLY wordmark is set in **Brandon Grotesque.** These are fixed vector elements—they don't require you to install anything. For everything else—presentations, documents, web, digital materials—F1R3FLY uses **Josefin Sans.**

Why: Brandon Grotesque is a commercially licensed typeface that requires per-user installation and an active Adobe subscription. Distributing it across teams, contractors, and platforms creates font management friction and degrades brand consistency.

Josefin Sans is an open-source typeface available through Google Fonts under the SIL Open Font License.

It can be installed on any machine, embedded in any website, and used in any application — PowerPoint, Google Slides, Keynote, Figma, Word — with zero licensing cost or restrictions. Every person who touches a F1R3FLY document will render the correct typeface, every time.

Download Josefin Sans: fonts.google.com/specimen/Josefin+Sans

CONSISTENT BRAND LAYOUTS

GRID SYSTEM

All F1R3FLY layouts use a six column grid derived from the logo's 60/20/20 proportion. This ratio holds at every format size. The grid creates consistent structure without rigid templates.

Margins:
8.3% of width on each side. Divide the full width into 12 equal parts. The margins take one part on each side, leaving 10 parts for the 6 columns and 5 gutters. Given the grid is ratios, it scales to any format size and the margins always feel right relative to the content area.

Gutters:
2% of width between columns. Gutters are set at roughly 1/4 the margin width. Narrower gutters keep the columns reading as a unified block rather than disconnected strips. Wide enough for breathing room, tight enough for cohesion.

BRAND ARCHITECTURE

THE MASTER BRAND LEADS EVERY SUB-BRAND

They carry the F1R3FLY name, the firefly mark, and the core visual system. Each sub-brand can develop its own accent color and sector-specific imagery, but the foundation doesn't change.

Consistent across all sub-brands:

- F1R3FLY name and firefly mark
- Black foundation / dark aesthetic
- Josefin Sans and Source Sans Pro typography

ACCESSIBILITY

ACCESSIBILITY IS BASELINE PROFESSIONALISM.

We design to WCAG AA standards as a minimum:

- Sufficient contrast ratios
- Readable type sizes
- Proper heading structure
- Labeled form elements

Please use this website to check your text against dark and light background.

TEMPLATES AND ASSETS

THIS PAGE IS IN DEVELOPMENT

IT will link to downloadable templates and the brand asset library as they become available. For now, treat it as a directory.

- Presentation template (PowerPoint)—in development
- Email signature template—in development
- Social media templates—in development
- Brand asset download—in development

All templates and assets will eventually live in a shared portal.
Until then, the assets available are linked to on the pages referencing them.
