ABOUT THIS GUIDE

THIS GUIDE IS THE SINGLE REFERENCE FOR
HOW FIR3FLY.IO SHOWS UP VISUALLY—ACROSS
PRODUCTS, PLATFORMS, AND TEAMS.

Use it when creating anything that carries the F1R3FLY name:
presentations, documents, web pages, social posts, partner
materials. If it's not covered here, ask before improvising.
Areas still in development are marked.

This is a living document.

Check back for updates as the system evolves.

OVERVIEW OF BRAND

THE CORE ELEMENTS THAT HOLD THE BRAND TOGETHER.

Four things should stay consistent
across every F1R3FLY property:

The logo, the color system, the
typography, and the structure.

Consistency builds **recognition**,
and recognition builds **trust**
and **credibility**—especially
with enterprise and institutional
audiences, who read inconsistency
as instability. This book exists
to reflect our work, and to build
recognition, trust and credibility
in our visual systems.

Logo

Colors

Headline

Typography

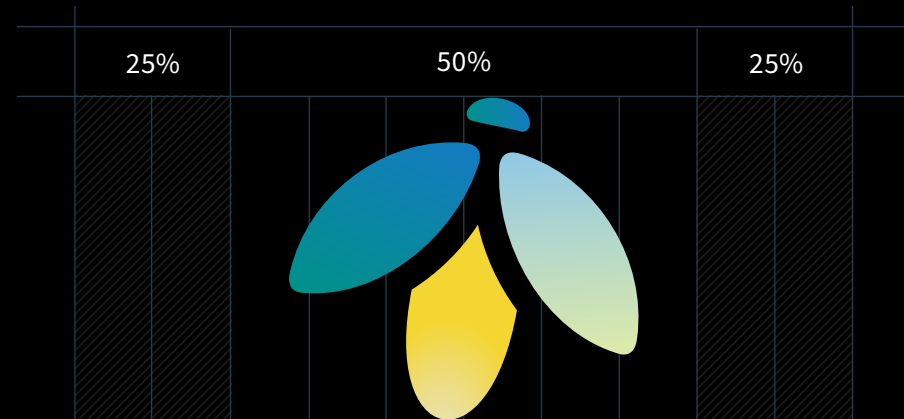

Layout

LOGO: VERTICAL LOCKUP

THE VERTICAL LOCKUP IS THE PRIMARY LOGO CONFIGURATION – LOGOMARK STACKED ABOVE THE WORDMARK.

The spacing between the logomark and wordmark is fixed at **30%** of the logomark height. The logomark occupies the center **50%** of the total width, with **25%** clear space on each side.

These proportions don't change at any size.

This gap is 30% of logomark height

LOGO: VERTICAL LOCKUP

CLEAR SPACE PROTECTS THE LOGO
FROM COMPETING VISUAL
ELEMENTS.

The boundary shown here is the minimum.

More space is always better.

The same margins, clear space, and minimum size
rules apply to every version of the F1R3FLY.IO logo:
vertical lockup, horizontal lockup, logomark
alone, and icon.

DOWNLOAD THIS FILE

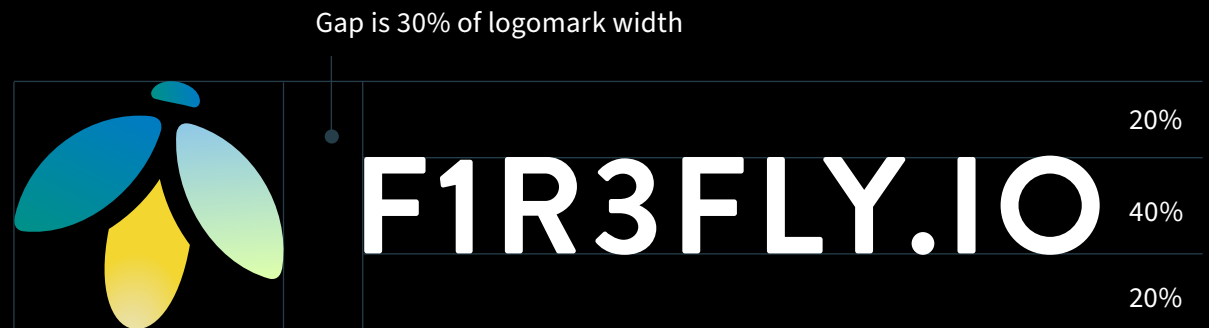

PDF, SVG, PNG IN A ZIP FILE

LOGO: HORIZONTAL LOCKUP

THE HORIZONTAL LOCKUP
PLACES THE LOGOMARK TO
THE LEFT OF THE WORDMARK.

Use it where vertical space is limited-headers,
footers, navigation bars, partner logo rows.

The wordmark sits within the center **40%** of the
logomark height, with **20%** padding above and
below. The gap between logomark and wordmark
is **30%** of the logomark width.

LOGO: HORIZONTAL LOCKUP

CONSISTENT RULES

Same clear space rules
as the vertical lockup.

The boundary around
the horizontal configuration
is the minimum keep-out zone.

PDF, SVG, PNG IN A ZIP FILE

LOGOMARK AND ICON

LOGOMARK AND ICON USE

The logomark can be used independently when the F1R3FLY name is already established in context—app icons, favicons, social avatars, watermarks.

The same clear space and minimum size rules apply to both. When in doubt, use the full lockup.

As small as a is flavicon

LOGOS FOR LIGHT BACKGROUND

THESE ARE THE VERSIONS FOR USE ON WHITE OR LIGHT BACKGROUNDS

The full-color logomark and the single-color black versions are both approved. Use full-color when the context supports it. Use single-color black when printing limitations or visual simplicity require it. The dark circular badge versions (bottom row) are for social profiles and app icons on light backgrounds.

LOGOS BLACK AND WHITE

THESE ARE THE THE BLACK AND WHITE VERSIONS FOR BOTH LIGHT AND DARK BACKGROUNDS.

These variations are for light and dark backgrounds when the use of black and white is required.

DOWNLOAD THIS FILE

PDF, SVG, PNG IN A ZIP FILE

LOGO RULES

DARK BACKGROUNDS ARE THE PRIMARY CONTEXT FOR THE F1R3FLY LOGO. LIGHT BACKGROUND USAGE IS APPROVED BUT SECONDARY.

Don't recolor the logo, distort the proportions, add effects, place it on busy backgrounds without sufficient contrast, or separate the logomark from the wordmark in the lockup configurations.

Logo files are available in SVG, PNG, and PDF formats. Always use the provided files—never ever recreate or approximate the logo.

COLOR PALETTE

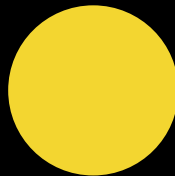

THE F1R3FLY PALETTE IS
BUILT TO BE THE LIGHT
IN DARK ENVIRONMENTS.

Black is the foundation—not a background color, the actual brand surface. Everything else exists in relationship to it—to emphasize light as a metaphor for innovation and bright, intelligent ideas.

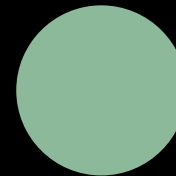

This is the primary F1R3FLY identifier—the gradient that ties cyan, sage green, and warm yellow together. Use it for section labels, navigation highlights, and brand accents. Don't use it as a background fill.

SECONDARY COLOR PALETTE

EACH AUDIENCE HAS ITS OWN GRADIENT IDENTITY.

These appear on both websites, and presentations. They can be used on social media visuals, and also on printed material.

On our website, these are applied to buttons, section backgrounds, and CTAs to signal who the content is for.

These gradients can be made lighter or dark by 10%, 20% etc, provided the same hue value is maintained.

Client Gradient: Use as the primary gradient for client-facing elements

TYPOGRAPHY

PLEASE NOTE

The F1R3FLY wordmark is set in **Brandon Grotesque**. These are fixed vector elements—they don't require you to install anything. For everything else—presentations, documents, web, digital materials—F1R3FLY uses **Josefin Sans**.

Why: Brandon Grotesque is a commercially licensed typeface that requires per-user installation and an active Adobe subscription. Distributing it across teams, contractors, and platforms creates font management friction and degrades brand consistency.

Josefin Sans is an open-source typeface available through Google Fonts under the SIL Open Font License.

It can be installed on any machine, embedded in any website, and used in any application — PowerPoint, Google Slides, Keynote, Figma, Word — with zero licensing cost or restrictions. Every person who touches a F1R3FLY document will render the correct typeface, every time.

Download Josefin Sans: fonts.google.com/specimen/Josefin+Sans

F1R3FLY.IO

Brandon Grotesque Bold

Josefin Sans Bold

Eyebrows, primary section headers/dividers

Josefin Sans Semi-bold

Pager headers and Subheaders, card titles

Josefin Sans Regular

Secondary UI text, captions

Josefin Sans Light

Large display text, hero headlines

Source Sans Pro is the body typeface.

Regular weight and bold for body text, and body headers.

CONSISTENT BRAND LAYOUTS

GRID SYSTEM

All F1R3FLY layouts use a six column grid derived from the logo's 60/20/20 proportion. This ratio holds at every format size. The grid creates consistent structure without rigid templates.

Margins:

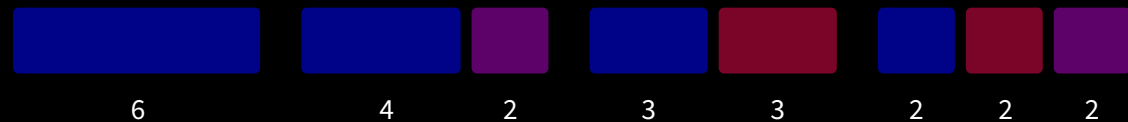

8.3% of width on each side. Divide the full width into 12 equal parts. The margins take one part on each side, leaving 10 parts for the 6 columns and 5 gutters. Because the grid is ratios, it scales to any format size and the margins always feel right relative to the content area.

Gutters:

2% of width between columns. Gutters are set at roughly 1/4 the margin width. Narrower gutters keep the columns reading as a unified block rather than disconnected strips. Wide enough for breathing room, tight enough for cohesion.

COMMON SPLITS

BRAND ARCHITECTURE

THE MASTER BRAND LEADS EVERY SUB-BRAND

They carry the F1R3FLY name, the firefly mark, and the core visual system. Each sub-brand can develop its own accent color and sector-specific imagery, but the foundation doesn't change.

Consistent across all sub-brands:

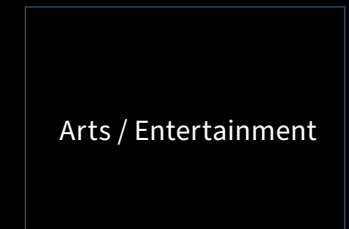

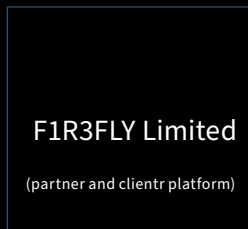

F1R3FLY name and firefly mark

Black foundation / dark aesthetic

Josefin Sans and Source Sans Pro typography

F1R3FLY INDUSTRIES

Products:

- F1R3SKY
- F1R3Drive
- Embers
- F1R3FLY Core
- F1R3FLY AI

ACCESSIBILITY

ACCESSIBILITY IS BASELINE PROFESSIONALISM.

We design to WCAG AA standards as a minimum:

- Sufficient contrast ratios
- Readable type sizes
- Proper heading structure
- Labeled form elements

Please use this website to check your text against dark and light background.
